

Dear all,

I am running a whole school science challenge that I would love for you to get involved in. It's easy to participate in at home or at school, so everyone can have a go. We will be following the practical action 'beat the flood' challenge. The aim of this challenge is to design and make a model of a 'flood proof home' for a family living in an area at a high flood risk. Use your imagination and try and think about the science that is happening whilst you are working. I have created a padlet where you can upload your pictures and comments – go to <https://padlet.com/edawkins/i91p22ev4iqbsiry> to access this. I've also uploaded lots of useful documents and videos that will help you make your creation, and there are suggestions of extension work that you can do as well. Alternatively, you can send your photos or work in by the usual channels (via the office).

If you would like me to see or comment on them, please try to upload your images and comments by Monday 15th June - I'll then put the second challenge up.

Good luck and happy making!
